Clase	Fecha	Tema/Lecturas	Detalle
1	13/08	Griffiths: Capítulo 1 – saltarse sección 1.1.5	Introduction. Vectors, Index Notation for Scalar and Cross Products. The Symbols δ_{ij} and ε_{ijk}. Differential Vector Calculus. Gradient.
2	20/08	Griffiths: Terminar de leer Capítulo 1.	Divergence and Curl. Divergence of Curl, and Curl of Gradient. Gauss and Stokes Theorem. From $\vec{E}$ to Φ. Delta Functions as Singular Distributions of Charge.
3	23/08		Properties of Delta Functions. Delta Function in Spherical Coordinates. The Laplacian of $1/r$. Coulomb's Law and Calculation of the Electric Field.
4	27/08	Griffiths: Desde p. 58 a 82	Deriving the Electrostatic Equations from Coulomb's Law. Scalar Potential, and E = -δV. Examples of use of Gauss's Law. Boundary Conditions for Electric Field. Conductors.
5	30/08	Griffiths: from p.82 to the end of chap 2.	Electrostatic Energy for Discrete and Continuous Charge Distributions. Energy as $f|E|^2$. Comments on Self Energy. Force Computed by the Method of Virtual Displacement. Generalized Capacitance, Capacitors.
6	03/09	Material parcial en Griffiths: p. 110-120 (puedes consultar Jackson secciones 1.9 y 1.10, pero no es necesario)	Uniqueness of Solutions. Green's Theorem. Green's Functions for the Dirichlet, Neumann and Mixed BV Problems.
7	06/09		Example of Dirichlet Green's Function. Mean Value Theorem. Images and Conducting Spheres. Separation of Variables for Laplace's Equation in Cartesian Coordinates.
8	10/09	Griffiths: p.121-137	Method of images – Separation of variables
9	13/09	Griffiths: p. 136 -145	The Case of Axial Symmetry, Finding the Basic Solutions r^l P_l and $r^{-(l+1)}P_l$. Generating Function for Legendre Polynomials.

10	24/09	Ejercicios	
11	27/09	Primera Prueba	
12	01/10	Griffiths: p.146-155	Multipole expansion
13	04/10	Griffiths: p.202-232	Dipoles, Quadrupoles. Azimuthal Symmetry. Magnetostatics, Charge Conservation and Magnetic Force.
14	08/10		Biot-Savart Law. Magnetic Potential for Loops. Deriving the Basic Equations from the "Inverse Square Law". The Vector Potential A and the Coulomb Gauge $\nabla \cdot A = 0$.
15	11/10	Griffiths: p. 285-310	Ampere's Law. Boundary Conditions for Magnetic Fields. Multipole Expansion of the Magnetic Field, Magnetic Dipoles.
16	22/10	Griffiths: p. 310-328	Electromotive Force and Faraday's Law. Inductance, Energy in Magnetic Fields, Maxwell Equations.
17	25/10	J: p. 142-143, and J: p. 168-177	Energy in an External Electric Field. And Basics of Magnetostatics.
18	29/10	J: p. 143-155	Dielectrics. The Polarization Vector P and the Effective Charge Density and Surface Charge. The Modified Gauss' Law in Terms of D and the Free Charge Density. Slits in Dielectrics. The Field of a Polarized Sphere. Clausius-Mossoti Equation.
19	05/11	Jackson: p. 187-191	Magnetic materials. Qualitative Discussion of Diamagnetism Paramagnetism and Ferro Magnetism. The Magnetization Vector M and its Effective Currents. The Magnetic Field Strength H.
20	08/11	Jackson: p. 191-197; p. 209-213	Boundary Value Problems in Magnetostatics with and without Magnetic Materials. Magnetic Potential Φ_M. A Uniformly Magnetized Sphere. And Faraday's Law for Fixed Circuits.
21	12/11	Ejercicios	
22	15/11	Segunda Prueba	
23		Jackson: p. 217-219; p.236-237	Faraday's Law for Moving Circuits. The Electromotive Force or emf. Maxwell's Equations. Energy Conservation, Energy in the Electromagnetic Field and Energy Flow. Poynting's Theorem and the Poynting Vector S.
24	19/11	Jackson: p. 238-239	Momentum in the Electromagnetic Field. The Electromagnetic Stress Tensor T_{ij} .

			Examples: Pressure, Force on a Conductor and Force on a Solenoid. Derivation of the Conservation Law.
25	22/11		Example: Spinning up a Charged Cylinder. Conservation of Angular Momentum and Flux of Angular Momentum.
26	26/11	Jackson: p. 219-226	Solutions of Maxwell Equations in Terms of Potentials. Gauge Transformations. The Lorentz Gauge and the Wave Equations for the Potentials. Green's Functions for the Wave Equation.
27	29/11		Derivation of the Lienard-Wiechert Potentials. The Fields of an Arbitrarily Moving Charge. The Fields of a Charge Moving with Constant Velocity.
28	03/12	Griffiths p. 435 -	Electric Dipole Radiation. Magnetic dipole radiation. Radiation from an arbitrary source.
29	06/12		Radiation from an arbitrary source. Power radiated by a point charge. Radiation reaction.
30	10/12	Ejercicios	
31	13/12	Tercera Prueba	
32	17/12	Recuperativas	
33	20/12	Prueba Especial
